

Mückenlarven
(im Projektor)

und durch

Ein Diaprojektor, dem ein Aquarium zwischen Lampe und Linse geschoben ist: im Wasserkasten schwimmen frische Mückenlarven, die die Wärme der Lampe lieben.

Mosquitoes go through four stages in their life-cycle: from egg to larva to pupa it takes about 5 days till the adult mosquito emerges from the water surface.. I prefer black mosquito larves and pupae for my projection. Adult females of this species unfortunately have the tendency to feed on humans, so if watch them for a certain time there is something to bring home from it.

Some scientists believe that eradicating mosquitos would not have serious consequences for any ecosystems.
